Relevant Experience

Principal Software Engineer **@ Dell**   (2022 - Present)

- Spearheaded an initiative to enhance the maturity of all applications under my director's team by 40% in a one-year period.
- Responsible for managing the backlog and roadmap of two major applications in the product line.
- Led the development efforts for the same two applications, offering support to the team, and overseeing code reviews and deployments.
- Architected a solution that successfully reduced the time of a customer critical process by 80%, eliminating the need for manual intervention.
- Partnered with the customer team to identify manual intervention points in the business process and designed a streamlined solution to enhance efficiency.

Senior Software Enginner **@ Dell**   (2021 - 2022)

- Accountable for devising and executing the launch orchestration plan for all application releases.
- Successfully reduced the vulnerability score of the application by approximately 20%, identifying vulnerabilities across the application infrastructure.
- Efficiently onboarded and assumed various responsibilities within the team, achieving team lead development in just six months.

Senior Developer **@ Conectt**   (2013 - 2021)

- Recognized as the Employee of the Year by the Board of Directors in 2015.
- Achieved a 60% reduction in the loading time of the UnimedPOA website, a major healthcare provider in Brazil, improving customer experience.
- Advocated for good practices among local team members.
- Successfully resolved a former customer bad experience through effective crisis management, fostering interpersonal relationships with key stakeholders/customers, and conducting problem-solving analyses.
- Conducted technical interviews for new candidates.
- Contributed to the company's frontend methodology code guide.
- Progressed from a junior developer to a lead developer within three years.

Developer **@ Imediata**   (2012 - 2013)

- Promoted to a full-time position following an 8-month internship.
- Contributed to the development and testing of a driver enabling MySQL database access from the Cobol File System API.
- Earned the trust of the team, allowing for the provision of outsourcing services to customers after just three months of the internship.

Skills

Programming Languages
